[CloserLook Search: Invisible Web \(deep web\) Search Engine](#)

In order to search invisible web sources, the search engine must construct search queries. Traditional search engines cannot do this. Each dynamic page from the invisible web has information that is specific to a particular query and is often a single use page. Search engines do not want to clutter their databases with these pages because of the sheer volume of data.

[The Invisible Web: What It Is and How You Can Find It](#)

The Invisible Web is estimated to be literally thousands of times larger than the Web content found with general search engine queries. According to Bright Planet, a search organization that specialized in Invisible Web content extraction, the Invisible Web contains nearly 550 billion individual documents compared to the one billion of the surface Web.
