What is Smokeless Powder and How it is Made

Smokeless powder is a propellant used in modern firearms, which is typically characterized by its ability to fire without creating a lot of smoke. Despite its name, it is neither smoke free, nor fine powder. On the contrary, it is available in a granular or tubular form and tends to produce a negligent amount of smoke when used in firearms. This 'negligent' amount, however, is a lot less than the amount of smoke produced by its predecessor the gunpowder or black powder.
