Steel Heat Treating

We offer our services in heat treatment, we have fluidized bed technology furnaces with automated nitrogen injection.

Heat Treating Steel - Hardening and Tempering

When heat treating steel, the steel is raised the its "austenitizing temperature". Blacksmiths often judge this by using a magnet. The hot steel is then quenched, transforming the austenite to martensite. However, in many cases, and in particular with high alloy tool steels, some of the austenite does not transform to martensite- hence the name retained austenite.

Common heat treating processes for Steel alloy | AmTech ...

The heat treating process is used to change the physical and mechanical properties, without altering the shape of a metal part. These steel treatments are provided through several different options to achieve two desired results, heat treatment - Deutsch- bersetzung Linguee W rterbuch

(1) This section applies to hot or cold fabricated seamless pipe elbows with an outside diameter equal to or greater than 80 mm and a wall thickness equal to or smaller than 50 mm from stainless austenitic steels and, in particular, pipe elbows that are solution annealed and quenched after heat treatment.
